

WBS 6.5.1.1: Tile Calorimeter Main Board

- Need to deliver 1200 Main boards to CERN
 - 100 in pre-production, 1100 in production (described in BOE)
- WBS includes R&D activities:
 - several design tweaking iterations (incorporate info from tests)
 - radiation certification of components
 - construction of "module zero" to refine firmware, calibrations, etc
- Head engineer has important role in Tile upgrade
 - needs to spend time at CERN ("expert weeks", training, meetings)
- Pre-production sets up the assembly line structure
 - and construction of burn-in benches, equipment, etc.
- Production done in 5-week cycles (80 boards ea)

Costing Details: Components

- We have the Bill of Materials from prototype production
- We have quotes for PCB assembly in various lot sizes
- Propose to purchase all passive components in 1 lot for volume discount
 - More expensive IC's assuming 20% discount
- Summary of cost per Main Board (1100 needed; 100 preproduction):

| Item: | Quantity of 100 | Quantity of 550 |
|--------------------|-----------------|-----------------|
| Passive components | \$96.23 | \$96.23 |
| IC's | \$704.38 | \$563.50 |
| PCB | \$400.00 | \$240.00 |
| Assembly | \$190.20 | \$182.00 |
| , | otal \$1,390.81 | \$1,081.73 |

Costing Details: Production Labor

- BOM, negociate discounts and special lots: EE
- Parts packages, short-test PCB: ET
- Oversee PCB assembly, initial testing, debugging with assy house: EE, ET
- Mount in burn-in fixtures; supervise students: EE, ET, UG
- Diagnose and repair failures; document: EE, ET
- Inventory, crate and ship to CERN: ET
- Acceptance test training at CERN and system integration meetings: EE

FTE Summary: 2.44 EE, 1.08 ET, 2.27 Undergraduate Students for production phase

LRS Structure: Rates

• Fully burdened rates. No IDC on engineers; 58% on undergrads

| FTE Inflation | hours/year percent/year | 1760 3.00% | | UC rates given to Chuck 5/18/2016 and inflated by him to start 10/1/2016 hrs/yr changed from 1776 to 1760 | | | | 1/2016 | |
|------------------------|------------------------------------|---------------|-------|---|-------|------------------|-------|--------|-------|
| | Base Cost (k\$/year – burdened) | FY17 | FY18 | FY19 | FY20 | FTE Rate FY21 | FY22 | FY23 | FY24 |

Some Labor Calculations

- PCB assembly: This involves significant testing and debugging to set up board stuffing at vendor. ET receives raw PCBs, inspects visually and performs tests for shorts; sends boards and parts packs to vendor. Based on demonstrator experience, EE spends 1-2 weeks with vendor to set up assembly machine. Upon receiving assembled boards, EE and ET perform visual inspection and testing for shorts before attaching leads and powering up.
- Burn-in: FEB are attached to MBs and monitored for 5d while operating at elevated temperature. There
 are 5 burn-in fixtures, each containing 4 MB; amounts to 2,200 total hours of testing. EE overseas this
 critical operation; ET mounts boards into fixtures, stores tested boards, and keeps an eye on the students.
 Students monitor the data acquisition, start/end testing cycles, and analyze and log the data. They also
 run calibrations and linearity tests on the FEBs.
 - 20% of EE overseeing, keeping records, reporting to management
 - 60% of ET conducting the process (essentially full-time during the course of each 30 week run)
 - 1 FTE undergraduate (done by 4 or 5 students) during each run
 - matches well with what was needed 1999-2000 for burn-in of legacy motherboards
- Repair: experience from the demonstrator and in-general: 10% of the boards will need attention.

 Diagnosis is done by EE. Difficult repairs are done by EE and take half a day on average (demonstrator).

 Simple (connector) problems fixed by ET: about 25% of boards, 1 hour each. Amounts to 20% each EE,ET.
- Shipping: Paperwork, crating, monitoring shipment = 1 week of ET
- Acceptance and management: the head EE is essential to the project; needs to attend 4 expert weeks/yr

U.S. ATLAS
WBS Summary Cost Estimates

Funding Source: All Funding Type: All 12/22/97 12:32:26 PM

- UChicago produced the legacy Motherboard + Digitizer: similar burn-in task
 - EE: 1512 hr
 - ET: 1568 hr
 - SRA: 3552 hr (this would be an ET in current proposal)
 - Undergrads: 3552 hr
 - o conversion: FTE = 1776 hr
- Total for production of 1128 boards: 5.8 FTE
 - cf: 5.2 in this proposal

Schedule compares well to 2001-3

similar task to produce "motherboards"
